

# Aluminium sun and weather protection

Aesthetic functionality

## About EHRET

Employing more than 370 members of staff, EHRET is the leading supplier of aluminium shutters in Europe. Drawing on over 45 years of experience, a wealth of specialist knowledge and a great deal of enthusiasm, EHRET produces outstanding-quality aluminium sun protection and weather protection systems day in day out. We strive to manufacture sustainable and durable products. Our customers fully appreciate our high standards.

### Durability

Preserving coated aluminium surfaces is vital for protecting the valuable shutter components over the long term. Our quality requirements are so high that they even exceed the international standards set for workmanship and coating. That is why EHRET shutters still look like new decades later.

### Functionality

Research and development play an important role at EHRET. We combine our technological expertise in the area of aluminium processing and powder coating technology. This produces pioneering services and solutions, which can be applied and installed smoothly and conveniently.

### Individuality

Unique requirements call for unique solutions. In cases like these, we work with our customers to develop tailor-made products. The customer and his or her requirements are our focus; shapes, colours and materials can all be combined.

### Flexibility

Thanks to our international alignment, we are big enough to guarantee flexibility even locally in our target markets. And we are small and dynamic enough to respond quickly and without fuss to what our customers need.

### Sustainability

EHRET has taken a strategic decision in support of integrated quality management. However, it is not only quality that plays a significant role in the success of the company: a credible environmental and health protection strategy does too. Our quality management enables us to manufacture perfectly coated and professionally assembled shutters that will provide joy for years to come.

## Aluminium – a superior material

### Easy-care and elegant

Aluminium shutters have many advantages. They are sturdy, lightweight and affordable and can stand up to the worst of the weather. Even after decades of exposure, they look almost as good as new.

Their light weight not only makes them convenient to install, but also easy to open and close.

There is no need for regular removal, repairs or painting, yet they keep your façade looking immaculate every day. So you can enjoy your EHRET shutters for decades to come.

### Affordable and durable

Because they last for such a long time and can be recycled when they finally come to the end of their lives, EHRET shutters are a valuable and sustainable investment.

Aluminium can be recycled any number of times in an environmentally friendly process. Our innovative in-house developments and extensive, certified quality standards are your guarantee of consistent excellence in materials, workmanship, safety and durability.

# Quality – long-lasting with no need for repainting

### Quality

Our products and service are geared towards both elegance and functionality. We achieve this through the unique quality of our products, which ensures that they retain their shape and look almost as good as new even after many years. We also support our customers, such as architects and specialist retailers, with design and advise them on product selection.

### And best of all, they never need to be repainted

The pre-treatment and powder-coating technique effectively protect the shutters against weathering and scratches. Because it complies with QUALICOAT and GSB guidelines, EHRET can guarantee maximum cov-

erage and long-lasting fade resistance. Because there is no need for repainting, this spares the owner a lot of work. For extreme conditions, such as those found in areas close to the coast, swimming pools or in the chemicals industry, EHRET has developed OCEAN-LINE plus, a special pre-treatment that also protects products from filiform corrosion.

- Weather-resistant
- Scratch-resistant
- Stable colour shade

## Window shutters – a vibrant tradition

EHRET window shutters are design features in their own right, blending seamlessly into the architecture to create a harmonious and unique façade.

Buildings designed with colour and form in mind have an unmistakable character. Whether you are looking for a traditional or contemporary concept, window shutters fit harmoniously into every aesthetic.

### Variety of models

- Fixed slats
- Moving slats
- Closed models

## Sliding shutters – blending the traditional with the modern

Because new builds generally have large windows, the shutters needed to shade them cover a large part of the façade and form a key design element.

Sliding shutters protect the inside of the building against strong sun and create privacy.

### Variety of models

- Fixed slats
- Moving slats
- Closed models
- Real wood slats
- Fabric canopy

## Folding sliding shutters – compact and elegant

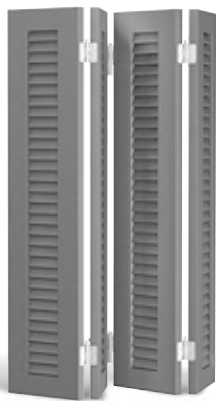

Folding sliding shutters open and close like a concertina with a relatively small opening radius, so they take up minimal space. The open shutters are held back against the façade. They also open up new possibilities in façade design.

Smooth-running rollers, mounted on ball bearings, glide almost silently along the rails. The folding sliding shutters can be opened to their full width.

### Variety of models

- Fixed slats
- Closed models
- Real wood

## Individuality – unique design options

For as long as people have been constructing buildings, value has been attached to both function and aesthetics. Architecture has always played an important role and architectural style shapes the overall look. Window shutters, which are available with a whole variety of different appearances, represent first-class design elements too. The latest trend in property design is individually designed sliding shutters. These can feature customised shapes, colours and centre elements.

- Special frame contours
- Imaginative designer sheets to suit your requirements
- Individual décor with the image of your choice
- Sophisticated and solid frame profiles

## Dual purpose with additional function

A shutter is more than just attractive sun and weather protection that can be folded, turned, slid or placed in a standing position. EHRET has responded to customer requirements and has integrated extra functions into its products. Without compromising the original functions, products have emerged with more added value.

- Sound protection
- Insulation

## More comfort and security

Whether they are required for a new build or a renovation, motorisation solutions and products designed to deter intruders provide enhanced comfort and security.

### Motorisation

With the VOLETRONIC electric drive (230V or Solar 12V), window shutters and sliding shutters can be closed or opened at the press of a button. Depending on the number of sashes, single or multiple-leaf systems can be created and operated. In addition to the classic hand switches, the motors can also be operated intuitively and conveniently using a modern remote control.

### Protection against intruders

Simple yet efficient measures are available for preventing break-ins. Window shutter models designed to deter intruders can be combined in a modular fashion with mechanical locking devices, according to requirements. This makes them highly resistant to unwanted visitors.

## Colours – unlimited possibilities

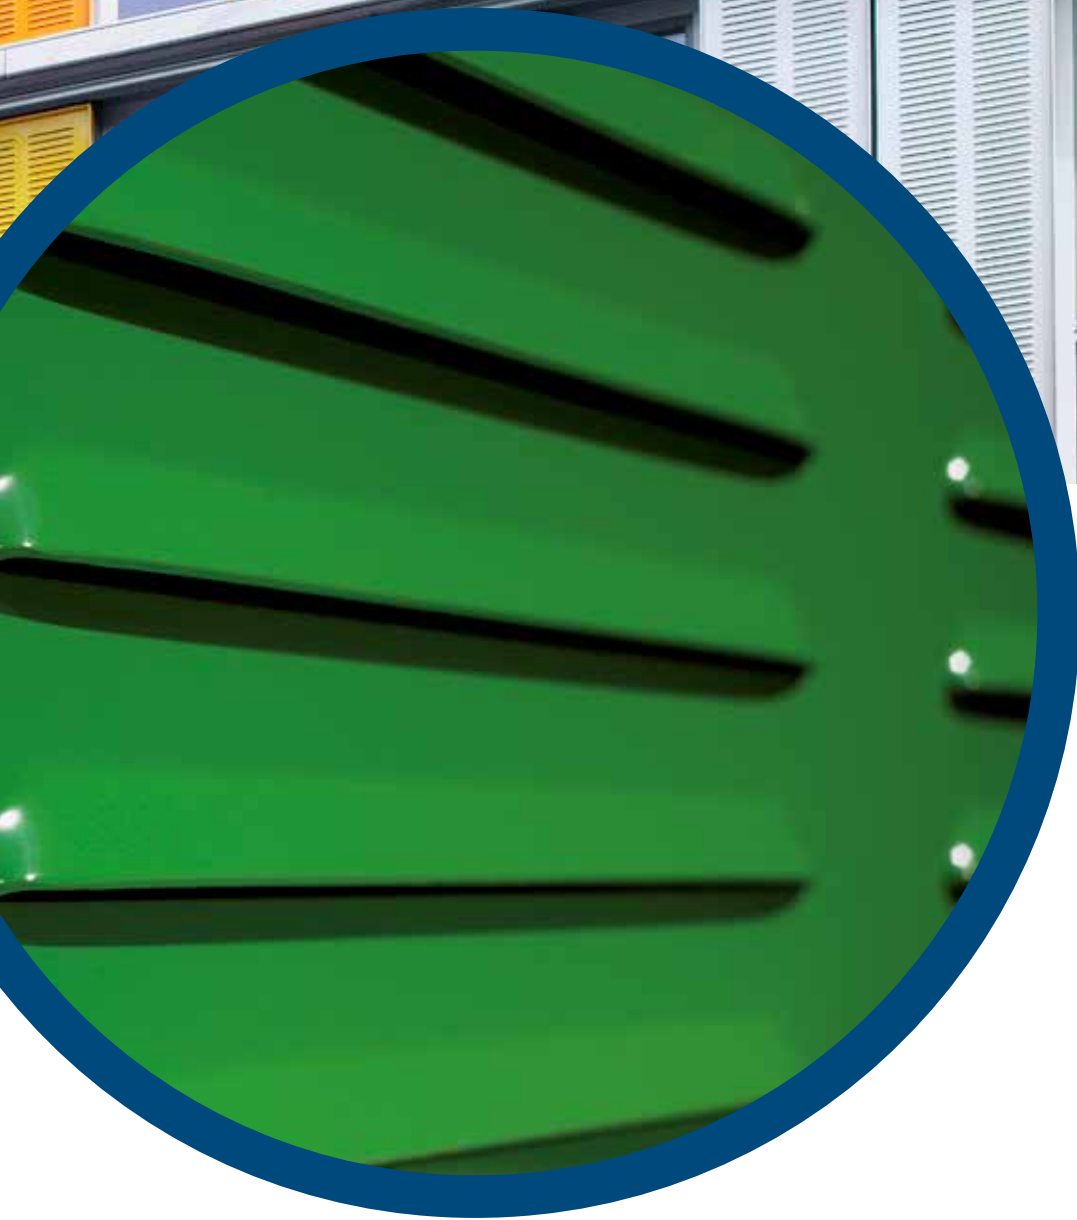

Colour plays an important role in the world of shutters. Colours evoke certain emotions and associations and, together with shapes, give the building a unique character.

Standardised colour systems allow the shutters to be colour-matched perfectly to other elements of the façade and vice versa.

There is a range of over 4000 colours

- RAL Classic
- RAL Design
- NCS
- VSR
- Futura

## Finishes – naturally beautiful

Shutters enable you to refine the design of your façade: thanks to a variety of structures, colours and shapes, they can be perfectly and individually integrated into the surroundings. The wood and stone finishes are amazingly authentic and natural-looking, inspired by nature itself. There are no limits to the scope of these surface finishes.

EHRET offers an extensive spectrum of finishes with different materials and provides scope for individual design preferences thanks to its flexibility, expertise and technology.

- Over 15 wood finishes
- Ageing and 3D effects
- Rust and patina effects
- Individual finish
